ABSTRACT

24. What is new is the union of the voice modem, with the smoke alarm, the marriage of the usb port and or the 802.11b wireless transmitter/receiver that automates the function of the smoke alarm making it a quick and efficient relay to respond electronically to home or business fires with precision, accuracy, contacting the appropriate Emergency Agencies to suppress the fire.

25. Eliminating the human panic factor in contacting the appropriate agency, the interrupt free operation will contact the 911 before many are even aware there is a fire saving lives and property damage if no one is home, saving not only the consumer but the insurance companies and the government billions yearly, with prevention.

26. With the use of a PC with a voice modem, a USB cable and one alarm and simple binary program on CD-rom that dials 911, audibly dictates through the voice chip the occupants, name , location (address) phone number, medical info, how many rooms, how many members, pets, a home, its occupants, and property can easily be protected.

27. The wireless model requires an inexpensive wireless switch available at any radio Shack, Circuit City, or wholesale outlet or can be offered tandem with the wireless model.

28. It also comes with appropriate software drivers and simple program. All are plug and play compliant, with microchips that are recognizable to Windows, Linux, OS Jaguar, etc.
